

Prepare your child for a Smart and Confident future

Vision

Our Vision is to focus on a curriculum that balances Academics, Co-Curricular Activities and Personality Development with a view to enable each child to become a Global Citizen. We will strive to inculcate and nurture leadership qualities in every child along with Self-Discipline, Ethical Principles, Respect and Concern for others.

Mission

Our Mission is to develop a Curriculum that focuses on Self-Learning and Practical Approach to learning Concepts.

We believe in

- Holistic Development of the Child
- Fostering a Caring and Creative Environment
- Preparing the Child for Intellectual, Physical, Emotional, Creative and Social growth
- Developing Leaders for the Future who are Collaborative, Inquisitive, Expressive and Enterprising Individuals.

A student at ROCKWELL demonstrates:

Respect - to all

Obedience - to law and custom

Creativity - inspirational and imaginative

Knowledge - vast... up-to-date

Wisdom - ethical... spiritual

Etiquette - refined

Learning - universally acknowledged

Love - endearing... all encompassing

Creative

Discovery - Based
Learning

A Journey Into Active Learning

Meticulous style of teaching has been developed to provide affluent and distinct educational experiences to our children. We believe students learn best when they learn through Experiential, Experimental and Learning – By – Doing methods in a non – coercive environment. Every effort is made to free students from rote – methods and shortcuts. Field visits, Excursions, Project Work and Research – based methods and Approaches that enhance the holistic development of students constitute the bedrock on which Rockwell's Education System (RES) is founded.

Integrated and Enriching Curriculum

Grooming For A Thinking, Complete Child

Students are introduced to a formal learning environment where they will have definite standards to achieve in terms of knowledge, understanding and skills. An integrated Primary Program blending the insights of various national and international syllabi will help pupils build strong foundations for rigorous higher studies. The unique academic delivery system will help students to build competencies in communication, skills in mathematics, a spirit of enquiry and a deep sensitivity to the environment. Art, Craft, Music, Dance, Drama and Sports which are an integral part of the curriculum, play a vital role in the development of personality of students.

Differentiated Instructional Strategies

Meeting Needs Of Each And Every Student

Each child is a unique mix of intelligences, interests, inclinations and preferences. Learning style, language proficiency, background knowledge, readiness to learn and other factors can vary widely within a single class room. Personalizing instruction therefore is a need, not a luxury, if we want our children to make the most out of their schooling. This process begins by developing profile of children based on observations, inventories, questionnaires and other instruments. This gives clarity about the rough make up of each student.

Teaching

Driven by Multiple
Intelligences

Discovering The True Potential

We believe that students learn best when they make connections with curriculum and their diverse interests. Our Multiple Intelligence teaching helps children learn in many ways – not just in the areas of their strengths. This approach allows the child sufficient flexibility to choose from different alternatives that arrive at the same objective. The approach seeks to develop a confident, self-assured and an optimally productive child. We implement the WHOLE BRAIN teaching strategies for convascing analytical, sequential, interpersonal, imaginative thinking skills in the child.

Child Centric Methods & Innovations

Well Designed Learning Environment

Every child has a way of approaching and receiving learning content. The learning content is presented in a way that attracts the child and makes him explore the contents through his preferred ways. Learning Style profiling helps to determine these preferences. Once the child's qualities are investigated and mapped, a clearer picture of how to take him through the instructional content in detail is derived. Generally, profiling will be attempted in: multiple intelligences, interests, special aptitudes and thinking preferences. Then, clusters of profiles are formed to make instructional sense.

Management's Vision:

We would like to see Rockwell as a school that focuses on holistic development of a child.

A school where overall development is given more importance rather than focusing on pure academics.

Co-curricular activities and sports are just as important as academics as they inculcate discipline in a child.

Children should be given a lot of freedom in the learning process. Teachers should act as facilitators and guides and not as just notes dictators. Identifying the unique potential in each child and encouraging them in that specific area is another aspect that we pride ourselves in.

We work towards achieving all these without compromising on building values.

We believe that parents and the school should work together in the growth of the child and therefore, we encourage parent involvement in many areas of the school.

Unlike other schools, we do not simply focus on infrastructure. While our facilities are all state-of-the-art, at Rockwell, our focus is to hire some of the best teachers and provide them with continued training in latest methodologies and class room handling techniques.

The Management's experience working around the world will add value to the entire team in making sure that this vision is achieved. We are also open to implement new methods and efficient use of technology and tools which will enhance the classroom learning.
